*Dear Fiverr user,
Thank you for choosing our service.*

*This is a brief document to answer common questions and
give you some hints for better cooperation.
Amaze Solutions*

THE TEAM

We are a small but very passionate team of internet enthusiasts who have been working really hard in the last ten years to research and develop new and innovative marketing strategies for web solutions, with particular attention to market trends, un-expensive targeting and customer satisfaction.

We will take care of your project and do our best to ensure that only **real visitors** will reach and see your contents, but this is not enough for us: you will always benefit from our **extensive support** and **expertise**.

WHAT WE DO

We have been constantly increasing and expanding our domains set for more than seven years in order to reach every kind of audience, and they are continuously renewed and refreshed to guarantee only visitors coming from domains with **good reputation** which have never been blacklisted or reported in any negative way.

Thanks to special, exclusive deals we have with hosting companies and domain registrars, we can count on **hundreds of thousands** of domains we use to gather visitors and bring them to your page, according to your niche.

When we receive an order, we include your website in a category and it will be picked up when a visitor lands on one of these domains which **matches the related set of keywords \ searches**.

The visitor doesn't notice the redirection because it's handled before any content is shown, so the experience is as **smooth** as possible and he landed there because he was looking for something he was **interested** in.

It would be incorrect to say it is targeted traffic since, in order to keep costs low, each category must hold hundreds of websites. However, it would be unfair to say it is not targeted at all.

For example, assuming your website is about cars:

John is looking for a new car

John lands on one of our domains

We show your page to John

Exclusively on
fiverr[®]

AMAZESOLUTIONS

service guide

THE STRATEGY

Immense pool of domains

Hundreds of thousands domains are constantly acquired, refreshed, and reindexed in our system to be put at your disposal. All protected and kept secure, to ensure the maximum quality and reliability.

Gathering visitors

People browsing online will eventually land on one of our domains by naturally searching for specific content on their preferred search engine, or by manually typing in the address bar a url for an old domain, now expired or parked.

Cutting-edge audience categorization

Our proprietary algorithm will take care of matching the domain's niche and category as well as the related keywords, and redirect the visitor to your page according to your content - all in a matter of milliseconds.

Machine Learning

Over ten years of research and data analysis at your service

Self-improving

Trends and niches data is constantly analyzed to improve audience-targeting accuracy

Seamless visitors experience

Visitors experience will be smooth, without any interruptions or annoyances during their navigation.

No popups, popunders or frames are involved – they will be redirected to your website, which will be entirely shown.

For security reasons we don't disclose any of our domains (owned, rented, parked or expired) in order to prevent any kind of attacks, injections, exploits, or abuses. Safety and genuiness of our system are our top priority.

THE STRATEGY - ADSENSE AND AD-NETWORKS PROACTIVE AGENT

Ordering services online might expose you to unwanted risks and that's why we exchange your trust by making sure **your website won't be harmed in any way.**

For this reason, our algorithms include a dedicated smart agent that **proactively inspects traffic and your website**, blocking the ads in case it's risky to display them.

Built with over nine years of data and constantly updated, the **Proactive Agent** not only verifies visitors before deciding to redirect or block them, but also inspects your page to make sure AdSense (and ad-networks) **policies are respected in full.**

When at least one of the policies is not met, the Agent will block the cookies used to serve advertisement when the visitor is redirected. As result, the ads won't be displayed, but you can rest assured your publisher account **will be protected.**

Even if the agent is protecting your ads and blocking them to visitors, they will still see your page and you will be building brand awareness and audience, which are the basics of a healthy website.

*Note that we **can't protect you from other sources.** Therefore, if you notice no impressions \ pageviews coming from us, it means the Proactive Agent has found possible policy violations and it is strongly recommended to verify everything is compliant on your end. The Agent will keep checking for the whole campaign and remove the block when all policies are met again.*

Some of the metrics monitored by the Agent are:

- Advertisement labels
- Competitive contextual ads
- Unsupported languages
- Ads code alteration, iframes, sticky ads
- Copyright infringements and illegal content
- Ads placement abuses

If you are not familiar with these points, we encourage researching online for more details.

We do not log, collect or process any data. Therefore, we won't be able to share any details about possible violations detected by the Proactive Agent.

FREQUENTLY ASKED QUESTIONS

General information

How many visitors should I expect and for how long?

Since our offers may vary over time, please always refer to Gigs' descriptions and their specific FAQs.

Can I promote an adult website?

Adult websites are welcomed as long as they abide by legal regulations for adult content.

Can I promote a social page (e.g. Facebook)?

We can promote social pages, but we can't guarantee likes or followers.

What kind of traffic am I going to receive? Is your traffic safe to use with AdSense?

All visitors sent by Amaze Solutions are 100% real. You will never receive traffic from BOTs, proxies, datacenters or any other kind of fake hits; people may see your page more than once, but this campaign will only consider the unique visitors.

The traffic will be Direct (without referrer) in order to ensure the maximum level of compatibility with affiliations and advertising services; that's why it is totally safe to use with AdSense or any other advertising network you may host on your website.

Is this service safe for my website? Will I be penalized from Google or any other entity?

We take every precaution in order to ensure quality and safety above everything else. We never had any problem with Google (or any other entity) in these years of activity, however there always is a percentage of risk when engaging with online services. Even though we always monitor the activity of our domains to keep them safe and clean from risks, Google can change its policies anytime, so you should take into account the possibility that something external from our job can trigger problems too. However, we are up to our duties and you can count on our prompt intervention to always keep everything safe – we never failed!

What kind of links can I promote, and which ones are not allowed?

Although you are entitled to promote almost any kind of websites and links (affiliations, CPA offers, blogs, etc..) some restrictions are applied.

We cannot accept:

- Adf.ly, Linkbucks, Adfocus and similar services
- Fiverr links, or Fiverr clones
- Pages automatically downloading any type of file without visitor consent
- Pages or websites that don't adhere to legal international regulations
- Pages prompting to perform an action before showing content (*including Captchas*)
- YouTube videos or channels (*however, you can embed videos in your page*)
- Any kind of page or link containing or spreading malwares (sorry to state the obvious, but some really do put malwares on their page to infect visitors. If that happens, we will promptly notify Fiverr's Admins and terminate the campaign.

If you are not sure whether your website can be promoted or if it contains invalid content, feel free to send us a message with the URL and we will be happy to check it for you.

What are the visitors going to see? Will they interact with my page?

Visitors will be free to browse your website without limitation; no frames or any other annoying banners are displayed.

Conversions, sales or leads may be possible but they are not guaranteed, due to the genuine nature of our promotion.

What about my privacy? Do you disclose any of my details to anyone?

We take privacy very seriously and we won't ever disclose any kind of details or information about our Customers to anyone.

From which countries will the traffic come from? Do you offer custom traffic packages from specific countries?

Packages and geo-targeting options are listed as Gig's Extras in our Gigs' pages.

Will I receive traffic from China?

Absolutely not. We don't own any Chinese domains, and we also apply further protections against Chinese spammers.

Can I block a specific country I don't wish to receive traffic from?

Feel free to specify that during the order, and we will do our best to accommodate your request. If you need to restrict to specific countries, please check our Gig's Extra or contact us for more information.

Please be aware that your website will be analyzed on activation and monitored during the campaign to ensure it meets the security policies. When an invalid website is detected, the campaign may be suspended without notice.

How can I track the visitors? Do you provide any proof?

On activation, you will be given a shortener link with tracking features which will be used by this service in order for you to keep track of the visits which are sent by Amaze Solutions.

You will also be able to track the visits straight from your tracking service, such as Google Analytics. If you don't know about this, please refer to the "Tips and Tricks" section to learn more.

In case the link you will provide us with will be already shortened, or an affiliate link which cannot be shortened, we will let you know and activate your link as-is without tracking.

We have been largely acclaimed for our Customer Support, you can feel safe in knowing that you will receive assistance in case of problems. It may occur when dealing with codes, Analytics and online services – and we will be ready to help you troubleshoot your issues and propose the best solution for them. We count on your cooperation to keep up the service!

FREQUENTLY ASKED QUESTIONS

Getting ready to order

What information do you need in order to get started? Do I need to install anything?

After you purchase the Gig you will be guided through the required steps, where you will be asked for the link you wish to promote and, eventually, a few keywords to help us categorize your campaign. You won't need to install anything in order for us to promote your page.

How much time is required for the campaign to get started? When am I going to see the results?

Orders are always processed on a first-come-first-served basis, but always within 12 hours. You will receive a message in the order's page as soon as traffic starts, along with all details about the campaign. Delivery of the order will be sent at completion of the work.

Can I provide keywords? How do you use them?

Keywords are asked to better categorize the campaign but they are not directly used (that would be Organic traffic from search engines). We do categorize and target your campaign manually, according to the information we gather from your page and the details you provide us with.

I don't know what keywords to provide

No worries! We will still inspect your website when building your campaign. We will take care of everything for you.

Can I receive sales with your service? Will visitors engage and interact?

Although possible, we can't directly guarantee engagement, sales, or conversions of any kind in general. There are too many factors that influence that, and it might not always be the traffic; for this reason, we can't guarantee that our strategy will result in engagement or conversions without content optimization and testing on your end, so it is important to evaluate and test with the traffic, even changing your content depending on the source of traffic to make it work better and start turning visitors into leads or buyers.

I want to promote a large quantity of links. Do you offer discounts?

Of course we do! Please contact us describing the nature of your request and we will propose you the best price possible.

Can I schedule traffic to come only at specific hours?

Unfortunately this is not possible at the moment.

I need to pause the campaign, or to change the website along the way. Is it possible?

Yes, it is possible for a reasonable amount of times. Just contact us and we will take care of your requests. When you pause a campaign, days will be held until it will be enabled again.

How will I know when my campaign is ending?

We will send you the campaign's expiring date within the activation message, and send the Delivery message at campaign's completion, so you will be totally updated about the status and eventually renew the service avoiding any interruptions.

Can I order multiple times for the same website? Will I get more traffic, or more time?

Please refer to the Gig's description and contact us in advance explaining your needs, we will do our best to accommodate your requests.

I'm currently receiving traffic from another provider or planning to; can I still order from you?

Although we discourage running other services at the same time ours is active, we never received any report of incompatibilities. Please note that we won't be able to offer proper support or guarantee the same quality in case other traffic services are present.

Add Gig's Extras if needed, and just click on «Proceed to Order» to get started!

After the payment, you will be asked to submit the information about your website.

Do you work outside of Fiverr? Can we communicate through your personal contact?

Absolutely not. We totally respect Fiverr's [Terms of Service](#) and we offer our services only on Fiverr. Requests to communicate elsewhere will be ignored.

Are you really able to guarantee such amounts of visitors?

We scale our resources and domains pool according to current demand and projections, in order to always guarantee a reliable, quality service.

How can you afford to offer this service for such a low price?

Although the initial investment was risky, we believed in Fiverr and in our expertise. We self-developed our own infrastructure to keep costs low, and by buying domains in large bulks we can afford to keep prices appetible and extraordinarily low considering the high quality offered.

☐ accept a tip that we will use to acquire more resources and improve the service, plus 5 bonus days	1 (\$5)
☐ provide only visitors from usa, or usa and canada, plus 7 bonus days	1 (\$5)

FREQUENTLY ASKED QUESTIONS

Common issues and troubleshooting

My campaign has just started but I can't see visitors yet

Google Analytics isn't real time, although there is some limited real-time data you can get through the Real Time reports.

For all other data, it's best to assume that Google Analytics is 24 hours behind. That being said, most small to average websites are safe to assume that Google Analytics is 6 to 8 hours behind.

Please also make sure to change the default report time to include today's date.

My tracker stopped showing visitors

Google Analytics uses a javascript code (the snippet) to send the information to the dashboard and present you the report: if the snippet code is removed from the website, the dashboard doesn't receive the information anymore. It may accidentally happen when replacing the website's template, updating a plugin, or manually modifying part of the code.

Just add the snippet again and everything should be working like before.

After the first campaign, I don't see benefits in the Google's SERP or Alexa ranking

Google's Serp isn't just a matter of traffic. You also need to work on the keywords and the content. Don't be let down: some websites may require months to skyrocket.

Alexa Ranking is based on different and various variables, and we strongly advise you to refer to their FAQs, starting from here: <http://www.alexa.com/faqs/?p=7991>

The url shortener report shows different data from mine

It's totally normal to see a difference between trackers, since they track visitors in two different ways. Url Shorteners, for instance, record every visit accessing the link server-side, but on-page trackers like Google Analytics rely on javascript which can result in less traffic tracked.

However, in the case this difference is too high, you can try following [Google's official tutorial](#) to improve the tracking script's timing.

My tracker is not showing any visits, or it's showing a different amount than the tracking link you provided / Bounce rate is high, or time spent is less than a minute

Before contacting us about this matter, please make sure that:

- Google Analytics or the tracker you are using is properly installed
- You included the tracker's javascript code in the page you submitted for promotion, and that tracking for sub-pages is enabled
- Make sure you placed the tracking snippet in the right section of the code
- Check if you are receiving Direct traffic ([Section Acquisition--> Overview](#))
- Your website is loading fast enough to not interfere with tracking

Do not hesitate to contact us for additional help, describing the issue and attaching a few screenshots of your traffic report (full page) in order for us to better understand and help you faster.

Will Google penalize me for high bounce rate in my report?

No, absolutely. The data you see in your GA reports are only for your personal use, to track and understand how to optimize your website, but it's not considered by Google. This quote is taken from Google's forums:

"Google has publicly stated that they don't use your site-specific GA metrics to influence organic search rankings.

E.g., they're not taking data from your GA profile, and feeding that to the Search Quality team to determine if your site should rank better or worse. They have MANY better ways to accurately track anonymous user interactions with sites at scale (e.g. Chrome)."

Why should I trust the report of the url shortener? Is it accurate?

When you shorten a link with Google Shortener (*or url shorteners in general*) a shorter link is created, and by using such link to send traffic each visitor flowing through will be recorded. Unlike Google Analytics, it doesn't need javascript to record visitors, making it very accurate, yet limited in features.

I've heard a lot of things about «fake» traffic and bots. What's your take on this?

Unfortunately, many traffic vendors do obtain visitors illegitimately, either by using bots (automatic software like autosurfers) or by tricking trackers to count an artificial hit as real. This is not what we do, and you are invited to analyze our traffic to confirm the genuine nature of our visitors.

Do you want to know how to catch whoever is sending real visitors and who is not? Check out the section [Tips & Tricks](#) in the next page to learn more!

I'm not getting any sales or conversions

We work very hard to provide you with the best quality traffic we can, but visitor actions can't be controlled, therefore clicks, conversions or sales can't be guaranteed or promised.

We advise you to stay away from who is selling clicks and offering sure sales: there is no legit way to achieve that, or everybody would be rich!

Real businesses grow on patience and time, and we will help you increase your chances of sales by sending real people on your page.

Even if you are not converting yet, continue tweaking your website and don't forget that you are still increasing your website's ranking and visibility while waiting for sales!

What does «unknown» means in the report?

Despite the scary name, that simply means the traffic is Direct, since it doesn't have any referrer \ source.

Google Shortener calls it «unknown», other trackers might call it «no source», but it's always Direct traffic and Google Analytics or javascript trackers in general will label it Direct, as globally recognized.

TIPS & TRICKS

Make your website load faster!

If you published a lot of content in the main page, you may want to optimize it with these small tips:

- Organize your articles in sections, and limit their display to 4-5 pages.
- Don't embed more than one video on the page; put a link with a captive description instead.
- Optimize your images for the web, by reducing the DPI or using thumbnails.
- Organize your images in Gallery sections.
- Use clean code as much as possible.

Installing Google Analytics

The installation is very simple and you can follow the easy steps described in the official Google Analytics [support page](#).

If you use a CMS like Wordpress or Joomla, you can look for handy plugins to install the snippet in just a few seconds.

Use UTM tags to better identify traffic sources

A UTM code is a simple code that you can attach to a custom URL in order to track a source, medium, and campaign name. This enables Google Analytics to tell you where traffic came from as well as what campaign directed them to you.

For example, we can use:

www.yourwebsite.com?utm_source=amazesolutions&utm_medium=amazesolutions&utm_campaign=amazesolutions

You will then be able to filter by those metrics and identify the traffic we will be sending, as well as seeing the overall statistics by clicking on (other) and then amazesolutions when checking sources, or by adding a secondary dimension.

More information about UTM tags could be found [here](#).

Google also offers a [very useful tool](#) to build your UTM tags.

Making sure Google Analytics is properly installed on your website

You can use [Google Tag Assistant](#) to make sure your Google tags such as Google Analytics, Google Tag Manager, Adwords Conversion Tracking, and more are working correctly. Using Tag Assistant, you can make changes to your tags and instantly verify that they are firing as intended.

Primary Dimension: Default Channel Grouping			
Source / Medium			
Secondary dimension: Source / Medium			
Sort Type: Default			
☐	Default Channel Grouping	Source / Medium ?	Acquisition
☐			Sessions
☐	1. (Other)	amazesolutions / amazesolutions	% of total
☐	2. Direct	(direct) / (none)	

Monitoring SERP conditions

Although not directly related to our service, it's always a good practice to monitor the SERP conditions for better ranking. For this purpose, you can use [Google Webmaster Tools](#), which will also scan your website for errors and recommend optimizations.

Identifying real visitors VS fake\botted\illegitimate visitors

Identifying and blocking bots is quite a large topic, but there are some key metrics and behaviors (or lack of) you can monitor in order to catch bots.

- No matter how good a bot could be programmed, human traffic mostly comes from household ISP and mobile carriers, while bot traffic originates from web hosting services, datacenters, or proxies (see section Technology --> Network of Google Analytics' report).
- Quite often, when checking the data of artificially-generated traffic, locations of origin may be focused on specific cities rather than evenly spread, suggesting that datacenters are being used to route fake hits to your page.
- Human visitors will (excluding javascript issues or missed code firing) spend some time on the page, so the bounce rate can't be 100% and the time spent can't be zero. If you see a bounce rate of 100% with zero time spent in the daily average and for all the visits, that's a sign of non-human traffic.

Of course, these are just a few points to give you a starting point to quickly understand whether a visitor or a source is legitimate or not. We always recommend taking the time to further research the topic and measure traffic sources.

Have any additional questions?

AMAZESOLUTIONS

service guide

FINAL THOUGHTS

We want you to know that every aspect of our service is marvelously curated and our goal has always been to offer you with the best traffic service you can find.

We are aware that traffic providers are very hard to trust and quality visitors sources extremely rare to find: that's why we never stop optimizing, learning and improving ourselves and our skills.

This guide took a lot of work and time to be produced, so we hope you found it useful!
Thank you for reading!

As a sign of gratitude, we would like to give you a special bonus code you can submit when ordering:

ASGUIDE18 – receive 3 free bonus days

Note: this is not a Fiverr coupon code. You can add it in the requirements, or by sending a normal message when submitting the order.

This document and its design has been entirely produced by Amaze Solutions and cannot be copied, edited or distributed without permission.
